Install & Download

1. ClawHub CLI

The fastest way to install a skill directly from the registry.

```
npx
clawhub@latest
install ibkr
```

2. Manual Installation

Copy the skill folder to one of these locations

Global ~/.openclaw/skills/
Workspace<project>/skills/

Priority: Workspace > Local > Bundled

3. Prompt Installation

Copy this prompt to OpenClaw to install it automatically.

```
Help me
install
ibkr using
Clawhub.
If Clawhub
is not
installed,
install it
first (npm
i -g
clawhub).
```

What is IBKR Skill?

The IBKR skill is a powerful bridge between the Interactive Brokers TWS/Gateway and the Openclaw Skills ecosystem. By utilizing the ib_insync library, it abstracts complex API interactions into a user-friendly CLI. This skill allows developers and AI agents to programmatically interact with one of the world's most robust trading platforms, facilitating everything from portfolio auditing to high-frequency data collection.

Whether you are building an automated trading bot or a financial research assistant, this skill provides the necessary plumbing to interact with IBKR's backend. As a core component of Openclaw Skills, it ensures high reliability and technical accuracy through its unified Python CLI and backward-compatible legacy scripts.

How IBKR Skill Works

- 1. The skill initiates a connection to a running instance of Trader Workstation (TWS) or IB Gateway via a specified host and port.
- 2. Users or agents trigger commands through either the `ibkr.sh` bash wrapper or the `ibkr_cli.py` Python engine.
- 3. The skill leverages `ib_insync` to qualify contracts, ensuring that symbols and security types are recognized by the IBKR exchange servers.
- 4. Requests for data or order actions are processed asynchronously, with the CLI providing real-time status updates or JSON-formatted results.
- 5. The system handles errors and connection states gracefully, returning non-zero exit codes for failed operations to maintain reliability within Openclaw Skills pipelines.

IBKR Skill Setup

To get started with this skill, ensure you have an active Interactive Brokers account and TWS or IB Gateway installed with API permissions enabled.

First, install the required dependency:

```
pip install ib_insync
```

Configure your connection settings using environment variables to streamline your Openclaw Skills integration:

```
export IBKR_HOST="127.0.0.1"
export IBKR_PORT="7497"
export IBKR_CLIENT_ID="1"
```

Test the connection by retrieving your account summary:

```
./scripts/ibkr.sh account-summary
```

IBKR Skill Data Schema & Taxonomy

The IBKR skill organizes data into several distinct categories to support complex financial workflows. Most outputs can be toggled to JSON for machine readability.

Data Category	Key Attributes Included
Account Info	NetLiquidation, BuyingPower, GrossPositionValue, AccountCode
Portfolio	Contract, Position, MarketPrice, AverageCost, UnrealizedPnL
Market Data	Last, Bid, Ask, Volume, Open, Close, BarSize (for Historical)
Order Status	OrderId, Action, Status, Filled, Remaining, LmtPrice

IBKR Skill Advanced Features

- Multi-interface support via unified Python CLI, Bash wrappers, and legacy compatibility scripts.
- Support for advanced order types including Market (MKT), Limit (LMT), Stop (STP), and Stop-Limit (STP LMT).
- Real-time market scanning capabilities with customizable filters for instrument, location, and scan code.
- Flexible data output options, including formatted tables for humans and JSON for Openclaw Skills automation.
- Comprehensive contract discovery for various asset classes including Stocks (STK), Cash (CASH), and Futures (FUT).

description: Comprehensive Interactive Brokers (IBKR) TWS/Gateway skill using ib_insync
```

IBKR Skill

Overview

This skill integrates with Interactive Brokers Trader Workstation (TWS) and IB Gateway through `ib_insync` , exposing operational IBKR workflows through:

A unified Python CLI: `scripts/ibkr_cli.py`

A bash CLI wrapper: `scripts/ibkr.sh`

Compatibility alias: `scripts/openclaw.sh`

Backward-compatible script entrypoints:

`scripts/get_account_info.py`
